

## Landscaper Series

Hydroseeding Systems

# L20

Easy Lawn's Landscaper Series Hydroseeding Units are smaller capacity units for patching with enough performance to do a small lawn when necessary. These units are designed for the cemetery, nursery, or small contractor who does occasional seeding, but still needs professional performance. The L20 offers industry leading performance for this price range, operating at 40 psi while maintaining full agitation. These units come standard with Easy Lawn's Liquid Recirculation Jet Agitation System that assures fast mixing, trouble free operation, and easy clean out. They will fit into the bed of a small or standard pickup, and with the fork pockets they are easy to pick up and place in the bed with a fork lift or skid steer with forks. The L20 has enough pressure to push the slurry through 100' of 1 1/4" hose. The units come standard with two hose hooks to hold the hose without kinking. The exclusive easy change nozzle system makes it fast and easy to change the nozzles at the end of the hose. Just unscrew the nozzle by hand and screw on the new nozzle, no tools required. The Easy Lawn gun assembly is compact and light weight to reduce operator fatigue.

### Specifications:

<b>Engine:</b>	3H	11.7 HP Honda Gas
<b>Tank Size:</b>		200 Gallon Polyethylene
<b>Fuel Capacity:</b>	3H	1.6 Gallons (US)
<b>Pump:</b>	3H	3"x2" Centrifugal Pump 30gpm/43psi
<b>Pump Drive:</b>		Direct Drive
<b>Agitation:</b>		Jet Agitation
